PROOM
simple. intuitive. secure.

The digital exchange platform for documents in manufacturing companies and for external collaboration

PROOM

Which document is the right one?

What has been a reality for social media platforms for quite a while now should also be applicable to the exchange of documents and files in manufacturing companies. Simple and easy exchange of data is possible today by email, but it is not secure enough for mission critical files. With emails you lose control as they get stored locally and copied, and FTP may be too complex to deal with.
Now there is an easier and secure way with PROOM!

The challenge

Manufacturing companies in particular rely on the repeated exchange of large and sensitive files that require frequent changes and alterations. These may come from departments, external partners, and everyone else involved in a project.

Would you be able to answer any of the following questions?

- Who sent what to whom?
- Which document is the most recent?
- Who can access the document and who is working on it right now?

Exchanging sensitive technical files is a delicate matter as these files hold company trade secrets and not everyone involved is working with the same systems. This results in errors, poor security, gaps in information, and less-than-seamless coordination.
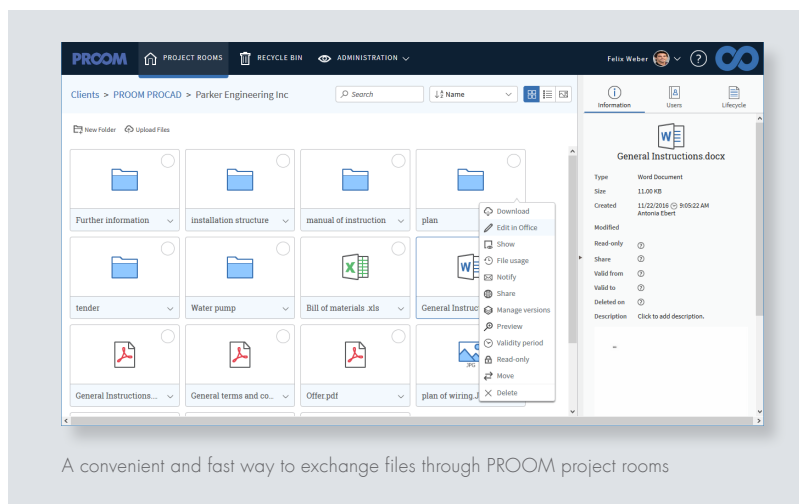

The solution

An exchange platform for manufacturing companies that is geared towards intensive collaboration with external partners should allow companies to control the exchange of their files and gain deep insights into any related activity.

PROOM provides a single platform for manufacturing companies to quickly and easily exchange their confidential information and to collaborate externally.
The PROOM digital platform is ideally suited for manufacturing companies within the context of an

A convenient and fast way to exchange files through PROOM project rooms

"extended workbench", for example when collaborating with design departments, development partners, service providers or customers. Such collaboration requires confidentiality, strict access control and seamless exchange of files, of various formats and sizes.

Collaboration across departments and companies can only be fruitful when everyone involved has reliable access to the latest, up to date information all the time.
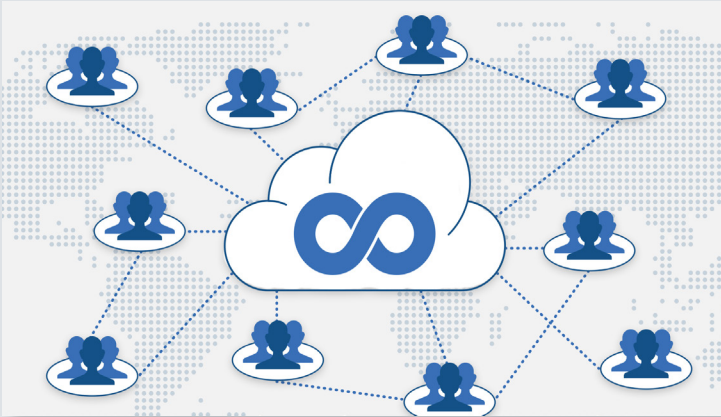

The strong case for PROOM

Email, FTP or traditional online file sharing solutions are a thing of the past. They carry a high risk of change conflicts, erroneos or outdated versions, and little to no insight into what has happened with these files. The alternative is PROOMing via virtual project rooms with controlled access for closed groups.

"PROOM is the only IT tool so far that has been met with nothing but praise from suppliers, customers, employees, managers, and IT professionals alike".

Jochen Matzke, IT Manager at UTS Biogastechnik GmbH

PROOM – simple, intuitive, and secure! Your next-generation file exchange platform

"Its file versioning capabilities, segmentation through project rooms, and convenient approach to the user and access rights management make PROOM an excellent choice as a cloud storage platform for engineering".

Netzsieger.de rating, Top 10 Products, Category Cloud Solution, 4.69 / 5 points

PROOM as a software-as-a-service (SaaS) solution easily adapts to your company's unique needs and requirements.

PROOM is available as a Public Cloud, or you may deploy it in your own datacentre in a Private Cloud.

PROOM protects sensitive files with its customizable authorization options: users get to decide themselves which files are visible to whom. Built-in and ready-to-print activity tracking logs provide full transparency. You can see directly who is working on which document now as well as when and how a file has been modified.

Intuitive & available from anywhere

An intuitive user interface makes it easy to quickly connect customers, suppliers, and external employees without administrative hassles. What's more, with its mobile App for iOS and Android, PROOM allows them to collaborate from anywhere and at any time.

Exchanging files at the click of a button

With PROOM, files are exchanged in real time from the central control panel through virtual project rooms. This gives design engineers and development partners instant access to the most recent, up to date versions and allows them to communicate seamlessly and directly using files stored on the platform with no need for separate emails.

- Simple managed exchange of technical documents

- Controlled and secure collaboration in virtual project rooms

- Customizable user permissions and built-in activity logs

- Available as Public or Private Cloud
